**CONFIRMATION OF SOURCE ORIGIN OF MSC REFINED TIN
PRODUCTION FOR BATCH NUMBERS : M 503, M 504**

MSC range of tin products including the 4Ns electrolytic tin is produced from various sources of feed concentrates including from the Democratic Republic of Congo (DRC).

The company is fully committed and actively engaged in a due diligence process in the DRC through the International Tin Research Institute (ITRI). The phase 1 of the due diligence process has been in force since July 2009 and all tin concentrates received from the DRC has been certified "conflict free" by the suppliers. The phase 2 which requires a physical audit of the supply chain has been implemented successfully since 2010 to ensure further compliance with the needs of the international community and to ensure that the tin concentrates are "conflict free". Since then, MSC has been certified as the Electronic Industry Citizenship Coalition, Incorporated (EICC) and the Global e-Sustainability Initiative (GeSI) Conflict-Free Smelter.

MSC will continue to adhere to the due diligence process and to strongly support in the EICC/GeSI Tin Validation protocol.

Yours faithfully,

MALAYSIA SMELTING CORPORATION BERHAD
BUTTERWORTH, MALAYSIA
